i2 Control V2.2 settings:

MENU

Settings of the i2 Control V2.2 application available for editing during project work.

UPDATE

Settings of project update on the control panel.

Host - the IP-address of the PC from which the update is performed. It will be written at "Search" of control panels in [iRidium Transfer](#) automatically.

Port - the TCP port for updating iRidium projects. It is not recommended to change it! If you need to change Update Port, do it in the Transfer settings.

Enable - activate/deactivate the project update function on the control panel.

Update Now - start the project update from the indicated Host:Port

SECURITY

Password 1 - Password 4 - [passwords](#) for accessing project pages. They can be changed for the project version uploaded on the panel. When using passwords it is recommended to disable the option of entering the menu "on hold" in the tab Info (Enable System Menu > Off)

RENDER

Disable NPot texture - it disable support of textures which cannot be divided by 2. On the outdated video cards it gives graphics performance improvement by increasing the required memory of the 3D accelerator.

DISPLAY

Scale Type - the way of project scaling (if the project resolution differs from the screen resolution)

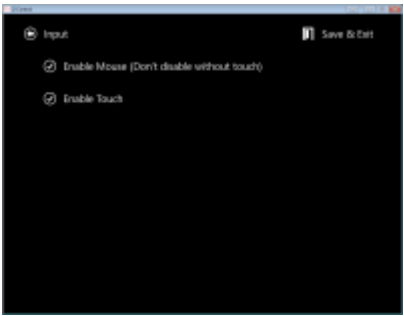

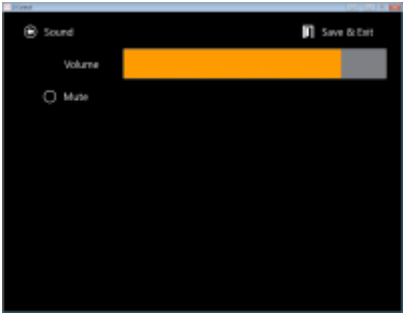

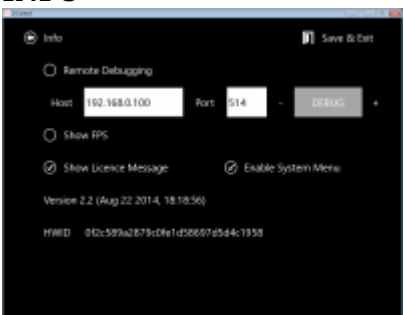

- None - not to scale (display with the initial resolution)
- Proportional - to scale considering proportions of the initial project
- Full Size - to scale to the screen size without considering proportions of the initial project

Brightness - control of the iPad, iPhone, iPod touch screen brightness

DEVICE

Drivers in the project. The settings of connection to equipment can be changed in the driver list.

<p>INPUT</p> 	<p>There are no properties in this section yet.</p>
<p>SOUND</p> 	<p>Volume - the sound volume in the application Mute - turn on/off the sound in the application</p>
<p>INFO</p> 	<p>Remote Debugging. It sends the log of i2 Control V2.2 work to the remote PC with the installed Syslog server. The server address and logging depth are set up. Show FPS - to show the speed of interface update (frames per second) Show License Message - to show/hide the message informing that the project is working without a license. Enable System Menu - to enable/disable activation of the i2 Control V2.2 settings by holding a finger in the application window. Version... - the i2 Control V2.2 version. HWID... - the identifier of the panel. It is used at licensing.</p>

The Limited Use Mode of Apple Devices

Guided Access - it is work of the Apple device in «the limited use mode», a standard function of Apple iOS beginning with iOS 6.

The guided access allows you to block the Home button so it could be impossible to exit the application. It also allows you to leave only a part of the screen active, limiting work with other areas. Activation and deactivation of the guided access is performed with the help of the password code. The lock screen and "sleep" functions work without changes.

Settings > General > Universal Access > Guided Access
